

# Update: School Route Name in API Documentation

Published 03/25/2021

As of July 12, 2021, this "Learn Veracross" site has been deprecated. It will remain live at least through October 1, 2021, but will no longer be updated. All Veracross Product Recent updates have been migrated to the [Product Updates](#) section of the [Veracross Community](#). Please update your bookmarks.

**Module:** Core Foundation

**Effective:** 4/17/2020

**Action Required:** None

Previously, when logging in to the Veracross API documentation, the system would auto-populate your school's URL route name in the example API feeds. Beginning today, in order to provide an additional layer of security, API documentation will no longer populate your school's route name in the sample feeds.

Moving forward, sample API feeds will instead show ':client,' which should be replaced with your school's URL route name when building any new feeds. No action is required for existing feeds.
